Press release

Fabasoft Cloud guarantees data storage at the most secure location in Switzerland

The cloud set in stone: Cloud locations offer freedom of choice and the assurance of knowing the physical location of where your data in the cloud is stored. At the longstanding heart of the Swiss National Defense, for example.

Linz / Attinghausen, March 6, 2013 – The modern cloud solution has a solid feel to it. With the worldwide unique concept of cloud locations Fabasoft guarantees its customers the security of knowing where the data storage takes place. The new cloud location Switzerland guarantees that data can remain 100% within the country.

Fabasoft's Folio Cloud offers customers efficiently structured business applications for targeted collaboration with business partners via the internet. This means high agility and speed in the implementation of business processes across company and country borders.

Conversely, the more extensive the possibilities, the more important familiarity becomes. Fabasoft is based in the "steel city" of Linz and is already well known, with Fabasoft eGov-Suite installations in federal departments and administrative bodies. This proximity to Switzerland has now taken on a physical dimension with the concept of **cloud locations**.

Helmut Fallmann, Member of the Fabasoft AG Managing Board: "The concept of cloud locations is unique. We offer our customers freedom of choice and the assurance of knowing where their cloud data is stored. With the new cloud location in the Swiss alps we have achieved a further milestone for more security in the cloud."

"Natural wonder meets Swiss engineering prowess."

Michael Imfeld, Vice President of Sales/Marketing at Deltalis, who built and operate the new main data center for the Fabasoft cloud location Switzerland, emphasizes the unique combination of "natural good luck" and the most modern computing: "Because of cooling needs many data centers are located in faraway cold regions. However, the 1000 meters of granite above and cold groundwater enable a highly energy- and CO_2-efficient facility in the middle of Switzerland. Just 1-2 data milliseconds from Zurich, Zug or Luzern – and less than an hour away by car."

It isn't by chance that the command center of the Swiss National Defence was, for a long time, hidden in this mountain near Attinghausen in Canton Uri. Only recently, all theoretically possible disaster and

terror scenarios were run through for highly sensitive data storage. The conclusion, according to Michael Imfeld: "It is the most secure data center in Switzerland. Full stop." The worst case down time per year is 5 minutes and 16 seconds, almost twice as good as what the strictest legal regulations prescribe.

Alongside security, Michael Imfeld attaches great importance to ensuring that the facility is "anything but a damp bunker": "Dryness, light, real office feeling… like a multi-story company head office, just inside a mountain rather than in the countryside or in an exposed site in the city."

About Fabasoft

Fabasoft is a leading European software manufacturer and cloud provider with its head office in Linz, Austria. Fabasoft has offices in Germany, Switzerland and Italy. Fabasoft's software products and cloud services ensure the standardized capture, organization and archiving of all digital business documents and records within a company (Enterprise Content Management). On this basis, Fabasoft accelerates the complete digitization of business processes, both via informal collaboration (social B2B collaboration) and structured workflows – internally and across company and country borders. Fabasoft unites passion for innovation at the cutting edge of technology with uncompromising product quality and the highest speed of implementation. This brings important competitive advantages through more agility in business and reduced IT costs. www.fabasoft.com

About Deltalis

Deltalis is an ultra-modern data center located inside the Swiss Alps. The mountain itself keeps the Deltalis data center energy-efficient and ultra-protected. A cool, constant year-round temperature inside the mountain, abundant cooling water and an innovative cooling system minimize electricity bills and CO_2 output. This brand-new 15,000 m2 facility is close to Zurich, has good road and rail connections and has access to the main north/south high-speed fiber Internet route through Switzerland. Experienced staff, the highest reliability standards (Tier IV) and the fastest data connections make this facility unique. Deltalis customers benefit from the high quality standards of one of the greenest data centers in the world, and also from its superior size and innovative technological set-up utilizing extensive natural water resources. www.deltalis.com
