

## Microsoft SharePoint Connector

.....

Please find inside a short guide to help you  
prepare your infrastructure for Mindbreeze InSpire.

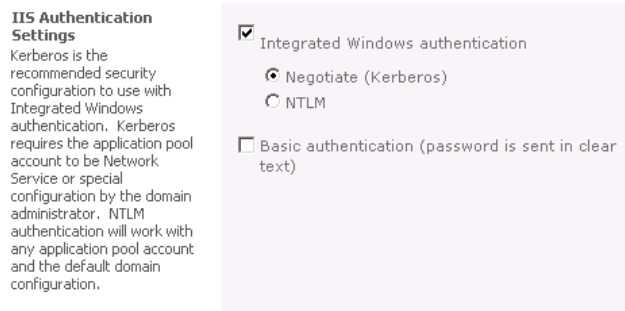

Support : Tel.: +43 732 606162 620 E-Mail: [support@mindbreeze.com](mailto:support@mindbreeze.com)

# Preparation

## 1 Microsoft SharePoint Crawler User

We recommend to create a separate user in Active Directory for the Mindbreeze services, for example, mindbreeze.crawler, but you can also use an existing user. The following points must be satisfied:

- User exists in Active Directory
- The user is administrator in Microsoft SharePoint
- The user has full read rights on the SharePoint Web application

## 2 Installation of the Services for Microsoft SharePoint

The Services for Microsoft SharePoint must be installed as following:

1. Open the ISAPI directory of the Microsoft SharePoint installation on the Microsoft SharePoint Server. The standard installation path is:  
C:\Program Files\Common Files\Microsoft Shared\web server extensions\14\ISAPI
2. Copy all the files from the prerequisites directory of the connector installation package in the ISAPI directory.

You can verify the installation by opening the following Web addresses:

```
<Microsoft SharePoint>/_vti_bin/GSBulkAuthorization.aspx  
<Microsoft SharePoint>/_vti_bin/GSSiteDiscovery.aspx  
<Microsoft SharePoint>/_vti_bin/GssAcl.aspx
```

# Configuration

## 3 Microsoft SharePoint Connection

The image shows a screenshot of a configuration window titled 'Crawl URLs'. It contains three input fields: 'SharePoint Server URL' (with a placeholder example 'http://sp2010.myccompany.com/'), 'Included URL (regex)', and 'Excluded URL (regex)'. Each input field has an 'Add' button to its right.

To configure the connection to the Microsoft SharePoint server, the following information is important:

- SharePoint Server URL: Fully Qualified Web address of the Microsoft SharePoint server
- With Included URL and Excluded URL, you can specify the pages to be searched
