1 Introduction

This document provides a short overview of the new features in the Mindbreeze InSpire 2015 Fall Release.

2 Search Results To Go

You just happen to need a list of all Java developers in your company? With a simple search, Mindbreeze InSpire gives you a list of the people you are looking for:

You're already well familiar with sending someone an e-mail or calling them on the phone. Our new Export function takes you one step further. You can export all the results of a search as a CSV document and then continue to work with them in Microsoft Excel.

How does that work? Located right next to the number of search results, you'll see the "Export" button. Clicking on it opens the Export view. You can then see a preview of the results and can adjust the exported properties. "Export CSV" starts the download.

BEREIT

100%

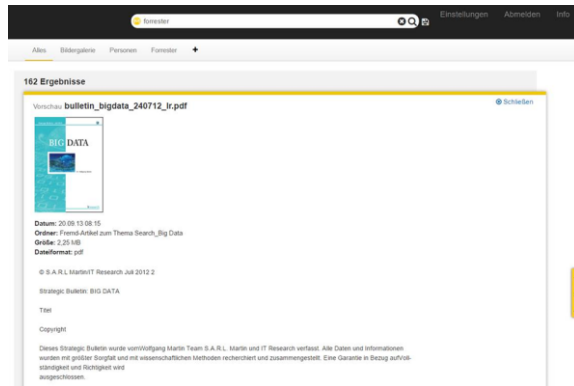

From here you can now pass the results on to other people, write a form letter or do whatever else you need to do.

The function is activated automatically; advanced settings can be found in the Client Service configuration under "Export Search Settings".

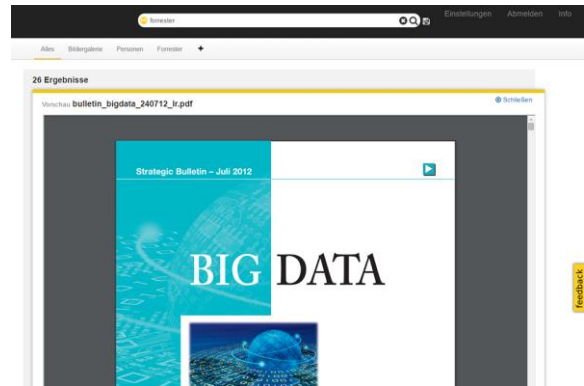

3 Improved Preview

For PDF, Microsoft Office and OpenDocument documents, a PDF document is displayed as a preview. Search term occurrences are highlighted as usual.

Before:

After:

This function is automatically enabled for Microsoft Visio documents. To activate the preview for a file type, use the setting: "FilterPlugin.OfficeDocumentToPDFContentFilter" under [Configuration for Mindbreeze Inspire - "filter" tab](#) for the file type. This makes an improved preview available for all indexed documents from that time forward.

4 More Suggestions

Now the search field will also suggest popular searches, recently performed searches and terms from taxonomies.

5 Microsoft SharePoint Connector Upgrades

Sites with anonymous access rights can be included in the search. In addition, properties of the HTML structure of Microsoft SharePoint pages can be extracted.

Details about the configuration can be found under:

[Microsoft SharePoint 2010 Connector - Additional](#) Settings

[Microsoft-SharePoint-Connector](#)

6 New File System Connector

The new File System Connector supports SMB, NetApp, CIFS and NFS network drives.

7 Date Filters can begin on a Monthly Basis

Date 

<input checked="" type="checkbox"/> All	
<input type="checkbox"/> November 2015	8
<input type="checkbox"/> September 2015	10
<input type="checkbox"/> August 2015	29
<input type="checkbox"/> March 2014	2
<input type="checkbox"/> January 2014	1

[Show more](#)

Date Filters can begin on a monthly basis. The sortorder begins from the newest to the oldest document.

8 Healthcheck

A Health Check is available to operate the Client Service behind a load balancer. This can be reached at <Client Service URL> / ping.

9 New Registration Options

Login/registration to the Client Service with [CAS](#) is now possible. In addition, the registration can be carried out on another system and forwarded via a secure connection to the Client Service.

10 Atlassian Confluence Upgrades

The Atlassian Confluence sitemap generator add-on can be used with Atlassian Confluence cluster installations.

11 New Document Types

Microsoft Visio Documents (.vdw, .vsd, .vsdm, .vsdx, .vss, .vssm, .vssx, .vst, .vstx) are now also searchable. The filter plugins for this are automatically activated after the upgrade.

12 Compatibility with 2015 Summer Release

Re-indexing is not necessary, but recommended.
